General informations

Colors

Background colors

□ background (p1BG)

■ foreground (p1FG)

■ text (p1TX)

Highlight colors

■ low (p1LO)

■ medium (p1MD)

■ high (p1HI)

Fonts

This documentclass uses the Droid family of fonts. Droid Sans is the default font, and the monospace font is Droid Mono. Math support is provided.

$$\int_a^b \alpha A \approx \sum \Pi \varepsilon \varphi$$

Note that the maths are rendered using `mathastext`.

Colors

The normal text is set in p1TX. The alerted text is in p1HI. It also works for α^2 maths. This slide has the b option to be bottom-aligned, to show the white space at the bottom.

The structure is in p1LO.

Options

This example presentation was compiled with `9pt`, `compress`, `aspectratio=169`, and `serif`.
To remove the progress bar below each slide title, use the `noprogressbar` option.
By the way, the progressbar colors are derived from `plHI` and `plBG`.

Plots

The theme comes with a few pgfplots options, notably in the form of pre-defined cycles.

Note that there are also some document-level options, such as (notably) `scale only axis`.

By design, most cycles are limited to three or four elements. This will force to keep graphs simple.

The default color of graphics is `p1MD`.

The plLineSymbol cycle

The p1LineType cycle

The pLineColor cycle (only three values!)

The p1Symbol cycle

The p1SymbolColor cycle (only three values!)

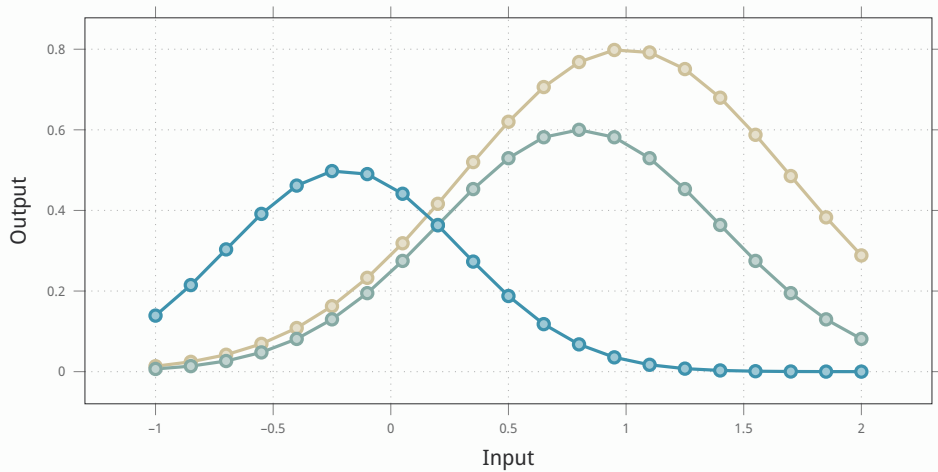

The p1SymbolFilled cycle (only three values!)

The `plLineSymbolColor` cycle (only three values!)

The `plLineSymbolFilled` cycle (only three values!)

Demonstration with two plots

The plLineGraph style

Useful if you don't want to have a full frame around the graph.

The plCenteredAxes style

Useful if you don't want to have a full frame around the graph.

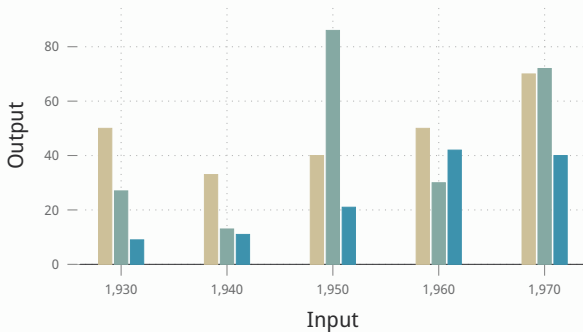

The p1NoAxes style

Used to not draw **any** axes.
For whenever you feel like
minimalism is the way.

The plVerticalBarPlot style

Sometimes barplots are a necessary evil. We've got you covered. There is a `plBarColors` cycle to go with it. Only three colors. Note that the y axis will *always* start at 0 when this style is used.

3D with plSurfacePlot

Code

General remarks on code

The highlighting of code is handled by `minted`, which uses `pygments` as the syntax engine.

Slides with code `must` be marked as `fragile`. For example, the beginning of the present slide is:

```
\begin{frame}[fragile]{General remarks on code}
```

Refer to the `minted` documentation.

Example

```
def double(x):  
    # This is not a useful function  
    return 2 * x
```

Final matters
