

## Presentation template

Timothée Poisot

August 3, 2017

Université de Montréal

#### **Colors**

# **Background colors**

- $\ \square \ background \ (plBG)$
- foreground (plFG)
- text (plTX)

## **Highlight colors**

- low (plL0)
- medium (plMD)
- high (plHI)

# Fonts

This documentclass uses the Fira family of fonts. Fira Sans is the default font, and the monospace font is Fira Mono. Math support is provided.

#### Maths

$$\int_a^b lpha \eta pprox \sum \prod arepsilon arphi$$

#### Colors

The normal text is set in plTX. The alerted text is in plHI. It also works for  $\alpha^2$  maths. This slide has the b option to be bottom-aligned, to show the white space at the bottom. The structure is in plL0.

#### **Options**

This example presentation was compiled with 9pt, compress, and aspectratio=169. To remove the progress bar below each slide title, use the noprogressbar option. By the way, the progressbar colors are derived from plHI and plBG.

## Plots

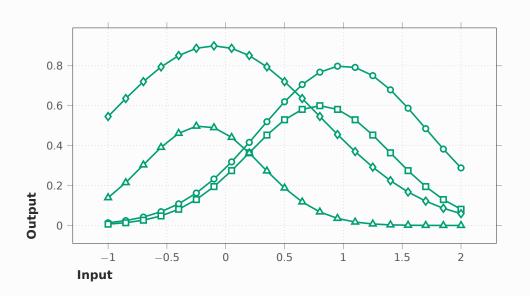

#### **PGFplots**

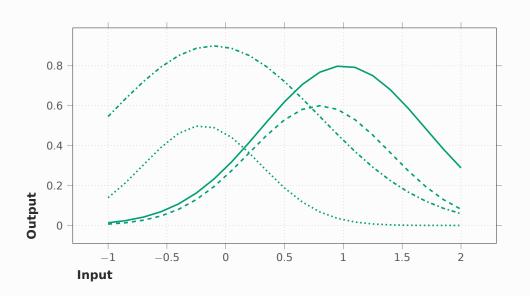

The theme comes with a few pgfplots options, notably in the form of pre-defined cycles.

Note that there are also some document-level options, such as (notably) scale only axis.

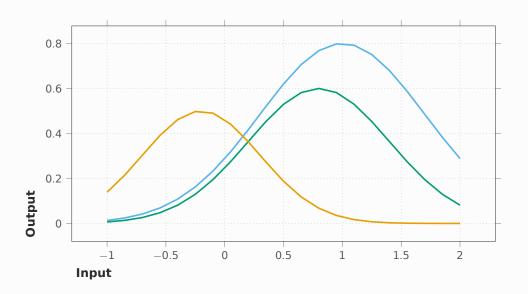

By design, most cycles are limited to three or four elements. This will force to keep graphs simple.

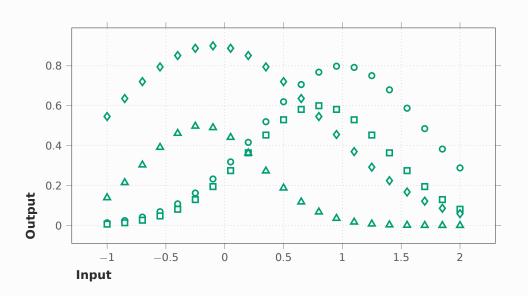

The default color of graphics is plMD.

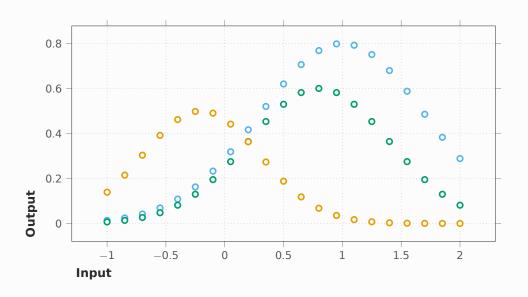

## The plLineColor cycle (only three values!)

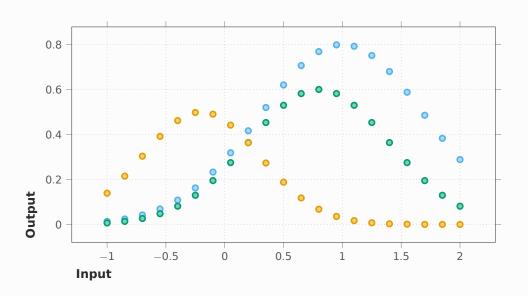

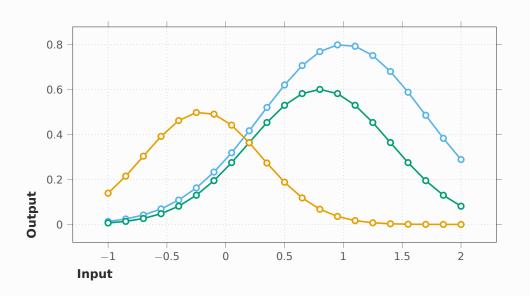

## The plSymbolColor cycle (only three values!)

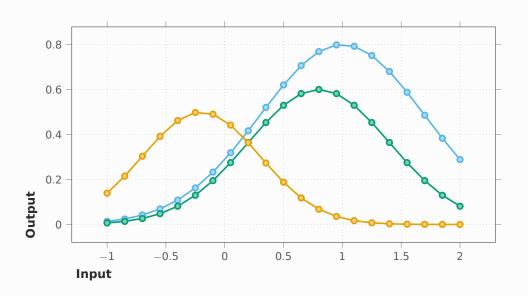

## The plSymbolFilled cycle (only three values!)

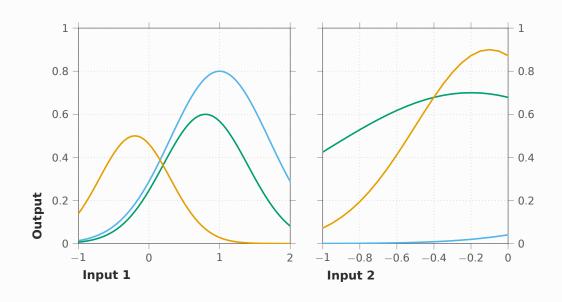

## The plLineSymbolColor cycle (only three values!)

## The plLineSymbolFilled cycle (only three values!)

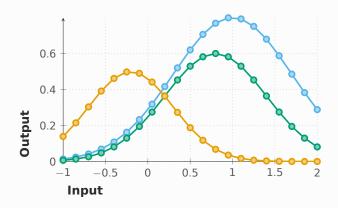

## **Demonstration with two plots**

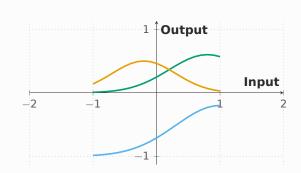

## The plLineGraph style

Useful if you don't want to have a full frame around the graph.

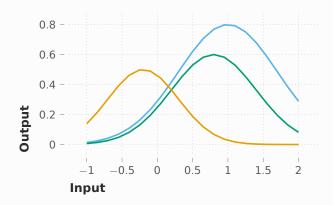

#### The plCenteredAxes style

Useful if you don't want to have a full frame around the graph.

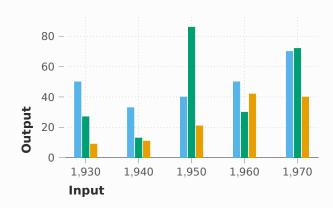

#### The plNoAxes style

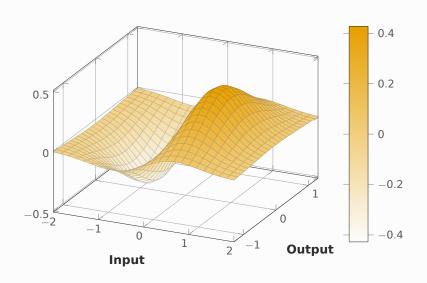

Used to not draw any axes. For whenever you feel like minimalism is the way.

#### The plVerticalBarPlot style

Sometimes barplots are a necessary evil. We've got you covered. There is a plBarColors cycle to go with it. Only three colors. Note that the y axis will always start at 0 when this style is used.

Code

#### **General remarks on code**

The highlighting of code is handled by minted, which uses pygments as the syntax engine.

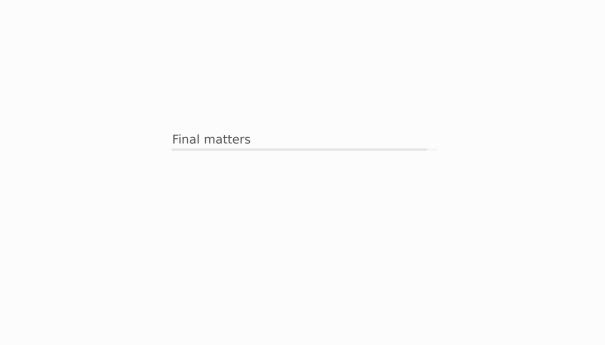

Slides with code must be marked as fragile. For example, the beginning of the present slide is:

**\begin**{frame}[fragile]{General remarks on code}

Refer to the minted documentation.

#### **Example**

```
def double(x):
# This is not a useful function
return 2 * x + \alpha
```

## Lots of original code from
